THE HISTORY OF AMERICAN AGRICULTURE

Compiled by T. R. Liao

TB 81-15 December 1981

SCOPE: The preeminence of American agricultural productivity is well known. American farmers fed not only this country but accounted for over $40 billion in export revenues in 1980, in addition to providing extra grain to disaster areas around the world. The history of this industry is one of succeeding and successful technical revolutions spurred on by Federal policies.

This guide is intended for those who wish to study the history of American agriculture through a review of the literature in the collections of the Library of Congress. Not meant to be a comprehensive bibliography, it is designed--as the name of the series implies--to put the reader "on target."
